

## Multilayer press from Bürkle under installation

### We have invested in a press from Bürkle Germany for multilayer production

The multilayer press arrived to our factory in Malmö in June 2020 and is under installation for startup in October-November, after tests and verifications.

The equipment will replace our old press from 1991. The Bürkle-press is oil heated with four day-lights and vacuum. A modern interface with press parameters is used for different types of materials and mixed dielectric.

The new press allows us to implement pinless registration and the possibility to manufacture 12-16 layer boards in the future.

## Lead free HASL

### Finally an up to date HASL installed

We are replacing our old machines one by one. The latest installation for tin coating, Hot Air Solder Levelling (HASL), are up and running for some months.

The machine improves the coating quality and working environment with fume cleaning. At the same time we replaced the pre-treatment and flux cleaning lines.

## Made in Sweden since 1970

### MMAB celebrates 50 years

We are proud and happy that we have been in the PCB-business for 50 years and are still a stable supplier to the electronics industry with our own production in Malmo, Sweden.

Despite tough global competition we have continuously invested in our own factory, being able to manufacture printed circuit boards with increased layers, reduced track and gap as well as smaller vias.
